

Kamay Botany Bay Environmental Education Centre

Stage 2: The Earth's Environment

Kamay Botany Bay National Park

Students will investigate the natural characteristics of Australian vegetation and native animals at Kamay Botany Bay National Park. Students will observe first hand the unique features of the dry eucalypt forest and sandy beaches of the Kurnell Peninsula.

During the excursion students will study how areas are managed to protect the natural features whilst keeping visitors safe. Students will use a variety of fieldwork tools to record their evidence, observations and investigations.

Students will take part in activities that encourage them to understand the importance of why National Parks are valued and why it is important to protect and manage them sustainably.

Geography

GE2-1 examines features and characteristics of places and environments

GE2-4 acquires and communicates geographical information using geographical tools for inquiry

Science

ST2-11LW describes ways that science knowledge helps people understand the effect of their actions on the environment and on the survival of living things

Perspectives of traditional Aboriginal lifestyle are integrated throughout the program.
