

# Geography Action Stage 4 & 5 Teacher Professional Learning

Geography Action will help participants develop an understanding of the geography inquiry process and how it applies to the development of sustainability focused and technology rich teaching and learning sequences that can result in positive action for the planet. Participants will examine and unpack Mobile Connections, a Stage 4 teaching and learning program developed to support the Interconnections strand in the Geography 7-10 Syllabus.

Participants will be introduced to the SAMR model of technology integration, and how this can be used to guide the meaningful use of technology in Geography. We will explore the use of apps and mobile devices to support the creation of quality communication products.
